

## MULCHING AND RECYCLE SYSTEM BY CARONI

SHREDS GRASS AND LEAVES WHILE CUTTING  
AND LETS THE SAVINGS GROW IN HARMONY WITH THE ENVIRONMENT

### MULCHING AND RECYCLE SYSTEM, THE EXCLUSIVE KIT BY CARONI

The Mulching and Recycle System kit consists essentially of a series of special blades and sheet crankcases that can easily be mounted on any Caroni lawn mower: while the cutting blade lifts the grass and/or the leaves by generating an ascending depression, the special blade with opposed fins keeps the cut grass and the leaves suspended in the crankcase until the contents of the compartment are shredded and homogeneous. The shredded grass is then distributed on the ground without hindering the correct motion of the pivoting wheels. In fact a special scraper prevents the formation of grass heaps.

### RECYCLING CUT GRASS REDUCES COSTS AND IS GOOD FOR THE ENVIRONMENT

A correct maintenance of green areas cannot leave the environmental protection concern aside, today more than ever before. The Mulching and Recycle System shreds grass and leaves and drops them on the ground while it works. In so doing it cuts times and costs for collecting and getting rid of the cut product down to zero, reduces the emissions of the exhaust gases that would otherwise be produced during this phase of the job, and gives better value to a natural resource that can be of remarkable benefit for the ground.

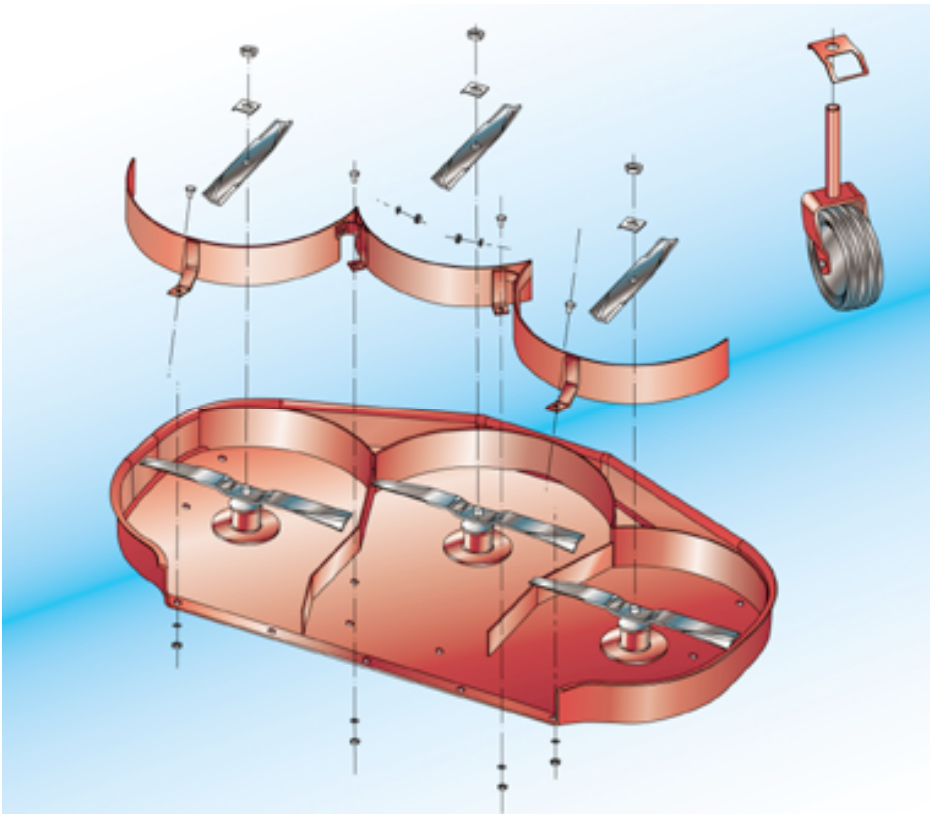

### **A SHARP CUT TO TIMES AND COSTS**

The combination with any Caroni lawn mower guarantees a sharp precise cut not only of your grass, but also of times and costs. It is no longer necessary to collect the cut grass in bags, carry and dispose of it in the dump. This translates into a considerable saving of working hours (average 30% ), of fuel for transportation to the dumping area and costs for its use.

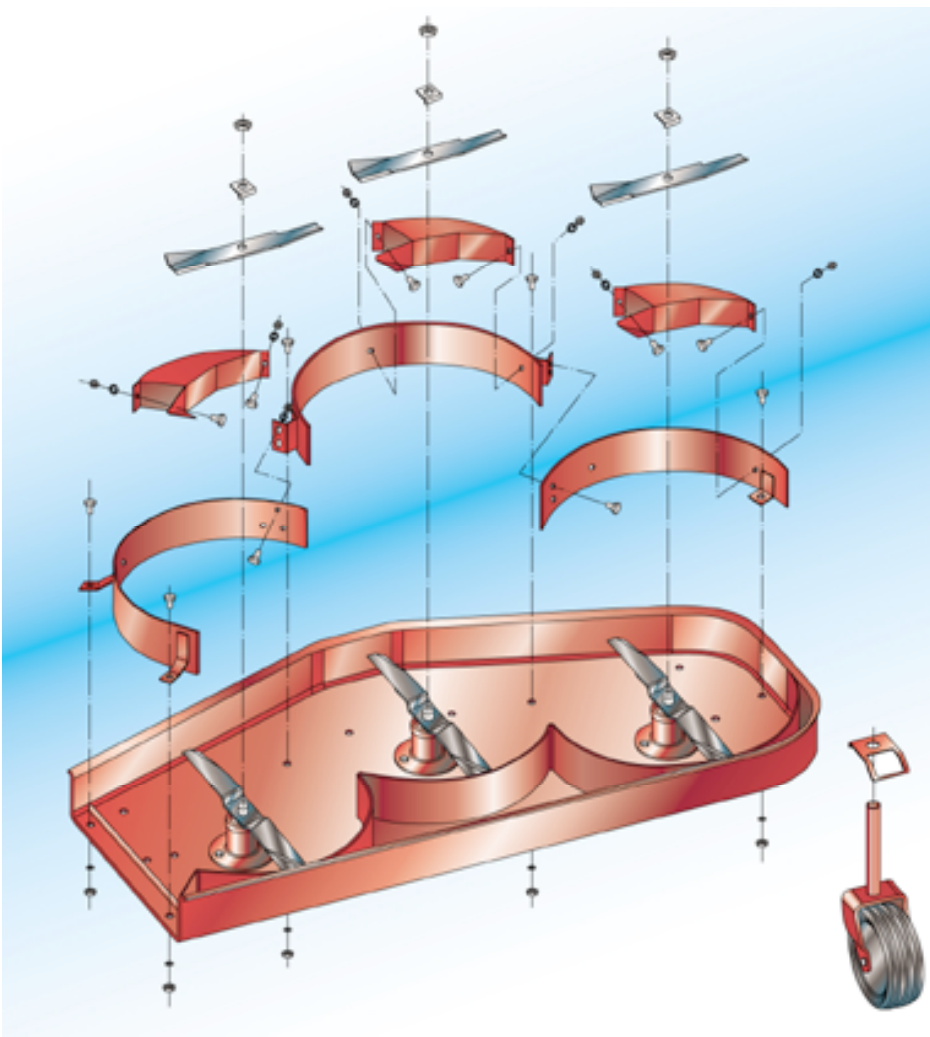

### **THE GRASS YOU CUT NOURISHES AND MOISTENS THE GROUND**

The grass cut in gardens, playing grounds, golf courses, etc. represents a considerable quantity of material and disposing of it means filling the dumps, already in trouble, with organic waste that can be re-used to a profit. Without mentioning the fact that this waste is collected and disposed of in plastic bags! Thanks to the Mulching and Recycle System, grass and leaves are shred finely and left on the ground where they decompose without forming any felt layer. Grass and leaves reenter the biological cycle and become an excellent natural fertilizer and help keeping the right moisture level in the ground. With a further advantage: reducing the need for fertilizers and water considerably.

**SAFETY ALWAYS IN THE FOREGROUND**

The product is shred inside closed crankcases and every Caroni mower is equipped with a safety deflector. Together with grass you also pulverize the risk of throwing pebbles and small objects while working.

## MULCHING SYSTEM IS AVAILABLE FOR ALL CARONI LAWN MOWERS

Many versions of the Mulching and Recycle System are available in order to cover the whole range of rear, side and multiple lawn mowers by Caroni.
